DETAILED ACTION

This office action is in response to Applicant's amendment filed on 9/20/2004. Claims 1, 5-6 have been amended. Claims 1-6 are pending.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

The present invention is directed to method and system for establishing secured communication pathways using mobile code in a Java Applet to secure data transfers between an application running on a remote server and a client mobile computing device connected to the remote server via the Internet. The closest prior art, Curtis (U.S. Patent No. 6,023,764) teaches establishing a secure connection using a web browser's installed certificate (mobile code) to set up and establish an encrypted session between the Java Applet and the secure web server. Curtis fails to teach the feature of the authentication server downloads a platform-independent mobile code authentication and encryption program to the user's mobile computing device upon authentication of user (without installed user authentication program) wherein the mobile code and the encryption program authenticate itself to the authentication server and the application server to establish a secure communication pathway with data encryption without requiring pre-installation of authentication and encryption client software on the user mobile computing device. The art of record, either singularly or in combination, fails to anticipate or render the above underlined limitation obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
